Copyright Tough daughter)

**Where God, Family
and Country is
not just a saying
it's a Lifestyle.**

**Find us on Facebook
850-869-0836
jims@browningandsons.net**

The Southeast Kiko Goat Association is an independent goat association whose goal is to promote and make known the benefits of raising Kiko Goats.

The Southeast Kiko Goat Association also has in mind trying to help the future goat breeders and farmers in the US. At our SEKGA Sale every year, we give away a registered doe to a school aged participant in our Skill-a-thon. They have to compete with the knowledge they have about several goat related topics. The most knowledgeable wins the doe.

Every year we also give away a scholarship to a child or grandchild of a member of the SEKGA, but they must be going into an agriculture related program. The application is on our website, and it opens in May.

PETCHER SEEDS

WORKING TOGETHER TO FEED AMERICA

WHAT IS SUNN HEMP

Sunn Hemp, a tropical legume, has the reputation of being one of the best soil-building cover crops in the world. It also has the reputation of being one of the best summer forages in the world for goats. Goats thrive on this forage. This plant grows very fast and typically reaches 6 feet in height in 60 days. It also is a legume so

WHY GOATS THRIVE ON SUNN HEMP

First of all, the leaves of the plant are over 30% Nitrogen. This boost in protein results in phenomenal herd health. At present there are no known toxins in sunn hemp that reduce parasites in goats. However, the fact that the goats will be mostly upward browsing is another dynamic effect on the herd as they will be ingesting few, if no, worm eggs. It is very important to let the sunn hemp achieve at least 32 inches, preferably 40 inches, in height before allowing the goats to graze. This typically will be around 45 days after planting. This allows time for the main stem to become a bit steamy

it replenishes the soil with Nitrogen. Within 60 days it typically replenishes the soil with over 100 pounds of Nitrogen and translocates from the subsoil 10 pounds of Phosphorus and 80 pounds of Potash per acre. It also adds 4 tons of organic matter and suppresses both Root Knot and Reiniform nematodes in the soil.

and then the goats will eat just the leaves. If the stems are mowed below 12 inches the sunn hemp may die instead of producing fast regrowth. If the sunn hemp is too tall, 6 feet or more, the goats may walk the plant down to eat the leaves and this usually kills the plants. So control graising is a must if you only have a small patch of sunn hemp. Allowing the herd to graze for one hour per day is ample. If unable to control graze ever day, allowing the herd to graze at least once every four days will produce dynamic herd health. Seeding rate: 15lb/per acre.

WHERE TO BUY SUNN HEMP
